

Segment: Early-Tenure Payment Friction

Business segment description for life insurance policy cohorts. Use this document to infer assignment logic and produce explainable segment labels.

- Policies in the first 18 months often show avoidable lapse risk if payment behavior is unstable.
- Monthly payment mode, lack of autopay, missed payments, and direct distribution channel are strong indicators.
- This segment should be treated as operationally actionable: outreach, payment setup, and onboarding support may reduce lapse.

Signal	Description
Duration	Less than 18 months since issue
Payment	Monthly mode, no autopay, or missed payments
Channel	Direct or low agent touch
Suggested label	early_tenure_payment_friction
